SATLOC® FALCON

SATLOC® FALCON PRO

The Next Evolution in AG Aviation Guidance Systems

The Satloc Falcon™ and Falcon Pro™ represent the next evolution in ag aviation guidance systems. Designed for speed, precision, and durability, these systems live up to their namesake — fast, focused, and built to last. **From liquid to dry applications**, the Falcon line delivers the tools today's aerial applicators demand, including real-time and offline background maps, advanced job logging, and Wi-Fi connectivity for seamless updates and support.

The Falcon system is engineered to handle all your core liquid application needs with efficiency and reliability. It includes essential features like multiple guidance modes, log file storage, real-time mapping, and Satloc Cloud compatibility. **Built-in Wi-Fi** allows for remote support and over-the-air software updates — no more USBs or dealer visits.

The Falcon Pro takes it further. It's pre-loaded with advanced tools like Top Hat control, Dry/Variable Rate Control, ready to go Dry Product Profiles, external CAN and seamless integration with Transland Dry Equipment. Every unlock is already activated — including Auto Dispersal, PMAPs, and Boom Control Input. Falcon Pro also comes with a **free one-year Satloc Cloud subscription**, offering added value and connectivity out of the box.

Pilot safety is front and center. Both Falcon and Falcon Pro systems include **ADS-B In** with no unlock fees. This feature communicates with the L8 & H8 Lightbar to give real-time visual alerts of nearby aircraft, helping enhance situational awareness in the cockpit.

Backed by intelligent hardware and thoughtful engineering, the Falcon and Falcon Pro offer a powerful new standard in GPS guidance. Whether you're spraying thousands of acres or managing precision dry applications, these systems are built to **keep you flying — fast, accurate, and connected**.
